Fire Risk Assessment for Healthcare Professionals

NEW

This new three day course, designed in discussion with the National Association of Healthcare Fire Officers, will help you to develop knowledge of the fire hazards and risks specifically associated with a hospital environment.

It puts fire risk assessment and fire safety management in hospitals into context, underpinned by NHS Firecode and HTM 05/01-3, and aims to develop confidence in resolving specific challenges faced in healthcare premises.

THE UK'S NATIONAL FIRE SAFETY ORGANISATION
Protecting people, property, business and the environment

New Training Course for Healthcare Professionals

Delivered by a fire safety professional with current experience of fire safety management in a complex hospital environment, the three-day course delivers practical training with hands-on risk assessment activities using actual hospital premises. The training will assist healthcare fire safety managers in increasing their levels of competence and confidence with risk management and carries CPD points awarded by the Institution of Fire Engineers.

Who will benefit

Fire safety advisors, estates officers or those with a responsibility for fire risk assessment in healthcare premises. It is advised that delegates enrolling on the course should have a reasonable knowledge of Firecode and some existing experience of risk assessment.

Learning Outcomes

Delegates will develop:

confidence in identifying fire hazards and assessing risks associated with fire in healthcare premises

knowledge of fire and smoke behaviour and associated fire stopping measures

knowledge of active systems in the mitigation of fire

understanding of building user implications in healthcare premises

understanding of fire safety solutions to minimize risks

ability to develop suitable emergency procedures for premises

knowledge of associated legislation, standards and documents

For further information about this course please contact FPA T
